

Let me help you make every choice count!

Global Warming will continue to escalate into more dramatic and devastating Climate Change unless each of us does our part.

I deliver free, tailored presentations on the science of and solutions to Climate Change. Afterward, I facilitate a dialog session to help individuals and organizations take real and immediate actions to stop the escalating climate crisis. Responding to this issue is so important to me, that I suspended my consulting practice for a year to spread the urgent call to action.

If you would like to host a presentation and action planning session, please contact me at:

Jean Baumann

Take Action Now to Stop Climate Change ~ Every Choice Counts

You don't have to wait to start making a difference...

- Calculate your "carbon footprint" to learn how much your everyday choices are contributing to the problem.
- Make new choices at home, in your car, and at work:
 - Eliminate excess weight and attachments from your car to reduce drag, drive less, combine trips, carpool, maintain tire pressure, turn off the engine when idling more than 10 seconds if not in traffic.
 - Unplug electronics, like cell phone adapters, modems, printers, PCs and TVs when not in use.
 - Conserve electricity and water – use CFL bulbs, weatherize, adjust thermostat settings, run only full loads of dishes and clothes.
- Schedule a free energy audit by Energy Trust of Oregon.

The choices we make every day contribute to greenhouse gas emissions causing Global Warming and Climate Change. Let me help you and your organization make better choices to lower your impact on the planet while also being socially responsible and economically viable.
